

	<i>IcqTesterAgent</i> <i>(uin1)</i>		<i>ICQ impl.</i> <i>(uin2)</i>
1.			add buddy uin1
2.			err - authorization is required
3.			authorization request to uin1
4.	authorization request from uin2		
	authorization denied to uin2		
			authorization denied from uin1
			authorization request to uin1
	authorization request from uin2		
	authorization accepted to uin2		
			authorization accepted from uin1

After this scenario a test method will assert if any of these events have not been received by the icq implementation.
